

F-CLASS PORTABLE PLANT

F-CLASS PORTABLE PLANT

The Tyler F-Class portable plant features mobile four-bearing technology to maximize production for aggregates and mining operations.

PULSE

Enhance screening operations with Pulse, Haver & Boecker's innovation in vibration analysis technology. It's designed for analyzing the health of all vibrating screen brands. Pulse detects irregularities that could translate into diminished performance, decreased efficiency and increased operating costs. We use Pulse to understand an operation's screening challenges, and we work with our customers to optimize any screening operation.

FEATURES

- Advanced double eccentric shaft design and four-bearing technology maintain consistent performance under surge loads to prevent material contamination
- Innovative split-bucket system simplifies maintenance and bearing changes
- Custom-built chassis combines F-Class vibrating screen along with periphery equipment, such as crushers or conveyors
- Hydraulic system allows for set-up in 30 minutes, positioning the screen at an optimal angle of 18-20 degrees
- Proper screen media selection virtually eliminates blinding and pegging
- Haver & Boecker's Ty-Rail™ quick-tensioning system comes standard on all side tension machines to cut screen change-out time in half
- Optional end-tension bottom deck available for easier maintenance
